Installation

Interaction Data Extractor is a CIC Web application and is installed using the installation procedure in the *CIC Web Applications Installation and Configuration Guide* found at:

https://help.genesys.com/cic/mergedprojects/wh_tr/desktop/pdfs/cic_web_applications_icg.pdf

There are additional prerequisites to using the Data Extractor application. Note, it is not necessary to install and configure the prerequisites if Interaction Data Extractor is not being used.

Oracle

In order to run Setup Assistant during installation and to allow the CIC server to communicate with an Oracle database, Oracle requires an additional **32 bit** client to be installed on the CIC server. For database version requirements, see

<http://testlab.genesys.com/ProductsPage.aspx?ProductType=9>

To maintain compatibility with all of the features in CIC, we recommend that the Oracle client path be added to the PATH environment variable on the CIC server, and we also recommend you create the ORACLE_HOME environment variable with the proper path. For best results, the version of the Oracle client should match the version of the Oracle Server. It is also a best practice to patch all Oracle clients after the client has been installed on the CIC server.

For information on patching an Oracle 12c client, see https://my.inin.com/products/selfhelp/kb/_layouts/listform.aspx?PageType=4&ListId={30AFF89A-F3A4-4E0C-9F7F-597BDB996AB5}&ID=238&ContentTypeID=0x0100BC7B80188A53F14EA868B7C68AB5686E

SQL Server

SQL Server does not require an additional client to allow a Windows Server based CIC server to communicate with Microsoft SQL Server Database, nor is an additional client required to run Setup Assistant. SQL Server features use ODBC drivers that are built into Windows Server. However, Interaction Data Extractor requires SQL command line utilities for SQL Server to be installed, which are not included by default in Windows Server. SQL command line utilities require an additional install and also require that the path to SQLCMD be added to the PATH environment variable on the CIC servers. SQLCMD must be installed on the CIC server.

To download the 2012 version of SQLCMD, see <https://www.microsoft.com/en-us/download/details.aspx?id=36433>

To download the 2016 version of SQLCMD, see <https://www.microsoft.com/en-us/download/details.aspx?id=52680>

For other versions of SQL Server (2008 or 2014) SQLCMD can be acquired by running the SQL Server Database Server Install and only selecting management tools to complete the install.

Note

When you are installing SQLCMD, you might receive the following error:

If you receive this error, you need to install Microsoft ODBC Driver 11 for SQL Server. For information, see

<https://www.microsoft.com/en-us/download/details.aspx?id=36434>.

Configuration

To configure the Data Extractor settings in Interaction Administrator, see the topics listed below **Configuration**.

Licensing

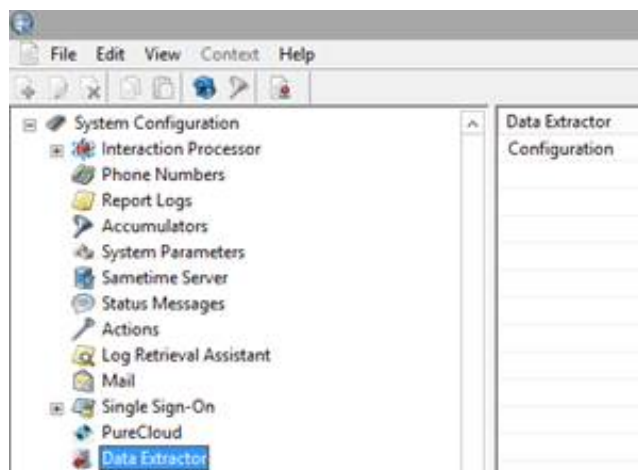

The Interaction Data Extractor requires an access license. To verify if you have the proper license, go to the License Management form in Interaction Administrator and look for the **I3_ACCESS_DATA_EXTRACTOR** license.

Title	Assignable Allowed	Assignable Configured	Concurrent Allowed	Concurrent Configured	Concurrent In Use
I3_ACCESS_CONTENT_MANAGER_READ_ONLY_CLIENT	100	0	100	0	0
I3_ACCESS_CONTENT_MANAGER_READ_ONLY_CLIENT...	100	0	100	0	0
I3_ACCESS_DATA_EXTRACTOR	100	11	100	0	0
I3_ACCESS_DIALER_ADDON	100	52	100	0	0
I3_ACCESS_DIALER_SUPERVISOR_PLUGIN	100	52	100	0	0
I3_ACCESS_DIALING_CALL_PORT_ADDON	100	0	100	0	0
I3_ACCESS_FEEDBACK	100	52	100	0	0
I3_ACCESS_FEEDBACK_SUPERVISOR_PLUGIN	100	0	100	0	0
I3_ACCESS_HISTORICAL_REPORT_SUPERVISOR_PLUGIN	100	52	100	0	0
I3_ACCESS_INTERACTION_CLIENT_OPERATOR_EDITION	100	52	100	0	0

If the license is not present or you do not have enough licenses, please contact your sales representative.

Data Extractor Settings

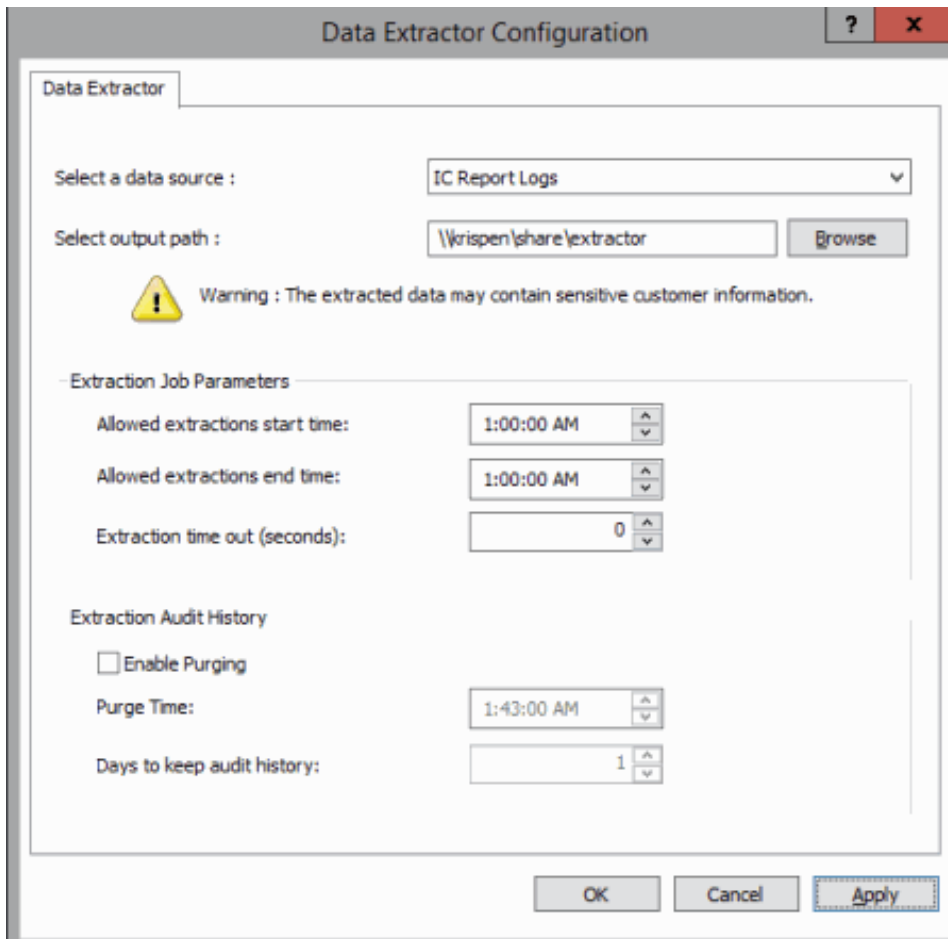

To use the Interaction Data Extractor tool, configure the Data Extractor settings in Interaction Administrator.

Configuring Data Extractor

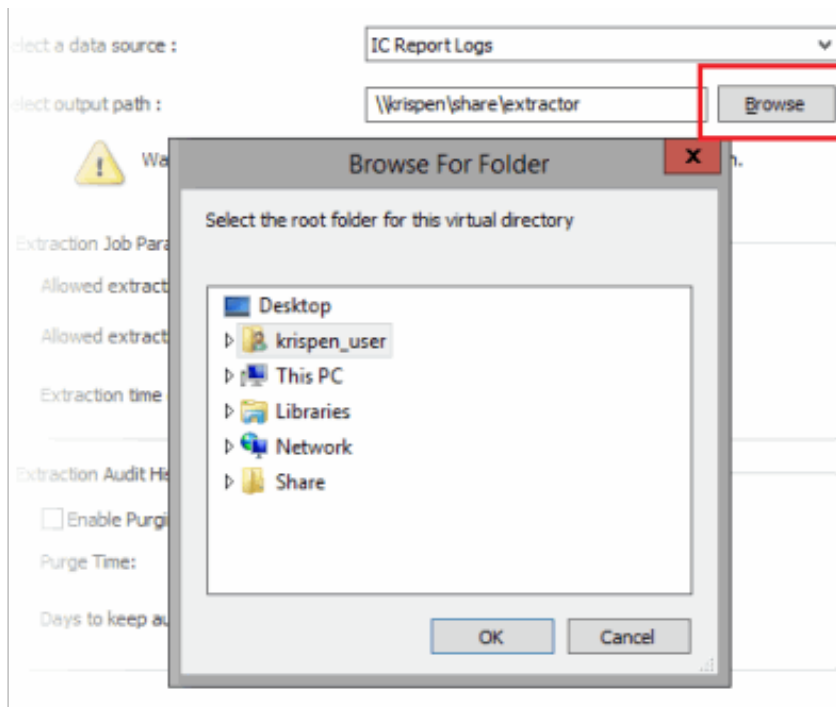

1. From Interaction Administrator, in the System Configuration container, select the **Data Extractor** subcontainer.

2. In the workspace under Data Extractor, click **Configuration** to open the Data Extractor Configuration dialog box.

The image shows the 'Data Extractor Configuration' dialog box. It has a title bar with a question mark and a close button. The main area is divided into sections. The first section, 'Data Extractor', contains a 'Select a data source' dropdown menu with 'IC Report Logs' selected, and a 'Select output path' text box with the path '\\krispen\share\extractor' and a 'Browse' button. Below this is a warning icon and text: 'Warning : The extracted data may contain sensitive customer information.' The second section, 'Extraction Job Parameters', contains three settings: 'Allowed extractions start time' (1:00:00 AM), 'Allowed extractions end time' (1:00:00 AM), and 'Extraction time out (seconds)' (0). The third section, 'Extraction Audit History', contains three settings: 'Enable Purging' (unchecked), 'Purge Time' (1:43:00 AM), and 'Days to keep audit history' (1). At the bottom are 'OK', 'Cancel', and 'Apply' buttons.

3. Select a data source for your extractions from the drop-down list.
Note: Only ODBC read-only data sources are available.
4. To select the output path for the extracted data, click **Browse**. The **Browse For Folder** dialog box is displayed.

The image shows the 'Browse For Folder' dialog box overlaid on the 'Data Extractor Configuration' dialog box. The 'Browse For Folder' dialog box has a title bar with a close button. It contains a list of folders: 'Desktop', 'krispen_user', 'This PC', 'Libraries', 'Network', and 'Share'. The 'krispen_user' folder is selected. At the bottom are 'OK' and 'Cancel' buttons. The 'Data Extractor Configuration' dialog box is visible in the background, with the 'Browse' button highlighted by a red rectangle.

5. In the **Browse For Folder** dialog box, navigate to the output directory for the extracted data, and click **OK**. The output path is displayed in the **Select output path** field.

Note The output path can also be typed or pasted directly into the **Select output path** field. The output path can be a UNC path or a local path on the CIC server. Be sure that the IC processes have write access to the output path location.

6. In the **Extraction Job Parameters** box, set the extraction window start and end times. This window specifies the time frame for when extraction jobs can begin. If you want a 24 hour start-time window, set the start time and end time to the same value.

Extraction Job Parameters

Allowed extractions start time:	1:00:00 AM	▲▼
Allowed extractions end time:	1:00:00 AM	▲▼

Notes

- A queued job will not start if the current time is past the end time and before the start time. The job remains in the queue until the next start time. Also if a job has started before the end time, and is still running when the end time is reached, the job continues running until it is completed or canceled.
- The Data Extractor service running on the CIC server might impact the CPU usage on the CIC server. The SQL utilities that are used by the Data Extractor service will run at below normal priority to minimize the impact to other IC services. Setting the allowed extraction times to off peak hours is another way to minimize CIC server impact.

7. The extraction timeout specifies how long an extraction job is allowed to run before being canceled by the server. In the Extraction Job Parameters box, set the **Extraction time out**, in seconds.

Extraction time out (seconds):

0 ▲▼

The default value is set to 0, which results in no timeout.

8. In the **Extraction Audit History** box, set the values for the extraction audit record purge. The audit history is used to populate the extraction job history.

Extraction Audit History

☐ Enable Purging

Purge Time:

1:43:00 AM ▲▼

Days to keep audit history:

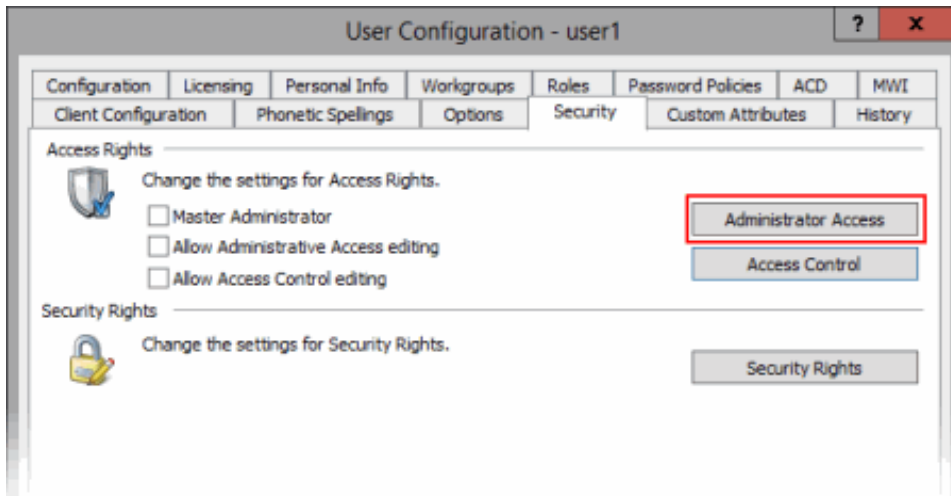

365 ▲▼

- Purging is disabled by default. To activate purging, select the **Enable Purging** check box.
 - Set the time of day to start the purge process in the **Purge Time** field. We recommend running the purge process during off-peak hours.
 - Set the number of **Days to keep audit history**.
9. Click **OK** or **Apply** on the dialog box to save settings.

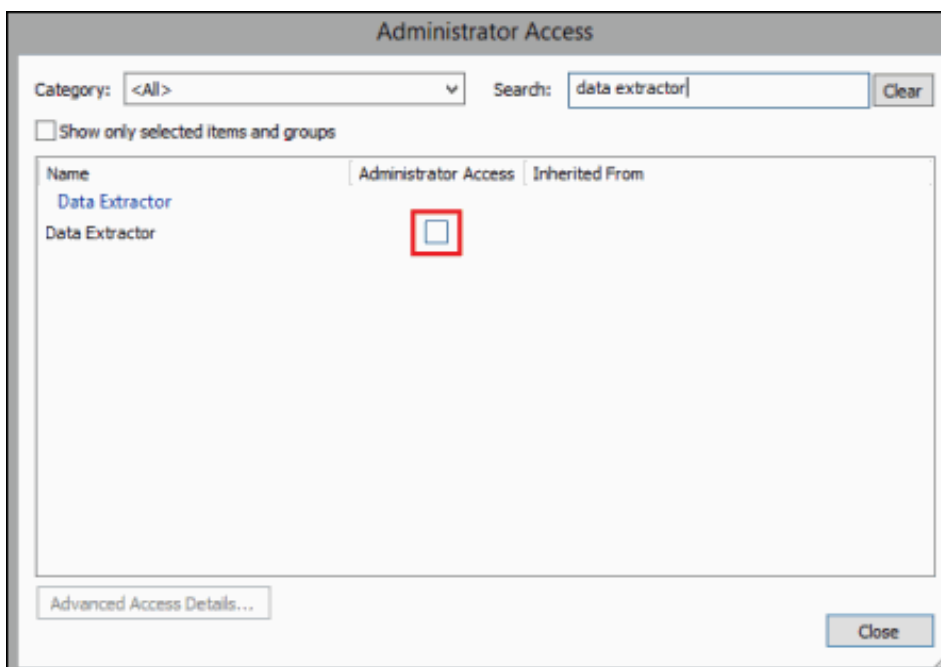

Administrator Access

You can assign which user, workgroup, or role has access to configure Interaction Data Extractor. Configure access settings for Data Extractor in Interaction Administrator.

1. From the People container, select Roles, Users, or Workgroups. In the workspace, open a role, user, or workgroup to display its Configuration dialog box.
2. Select the **Security** page.

3. Click **Administrator Access**.
4. In the Administrator Access dialog box, in the **Search** field, type **data extractor**. The Data Extractor rights are displayed.

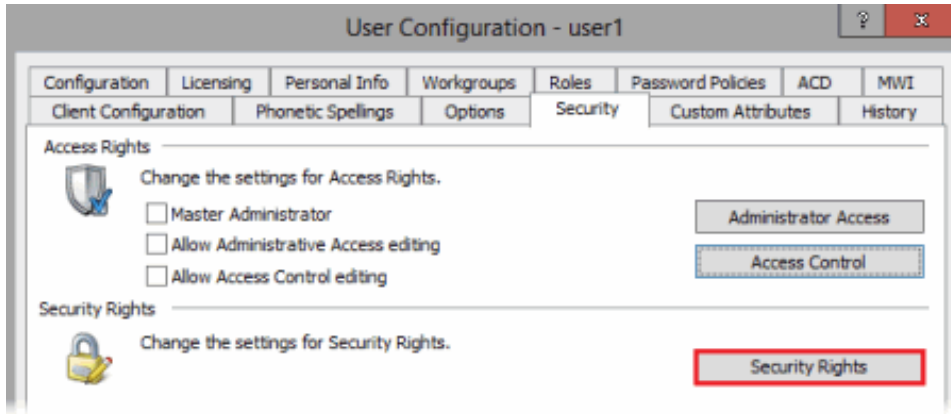

5. To assign the user, workgroup, or role Administrator Access, select the **Data Extractor** check box, or clear the check box to remove Administrator Access.
6. Click **Close**.
7. On the Configuration dialog box, click **OK** or **Apply** to save the settings.

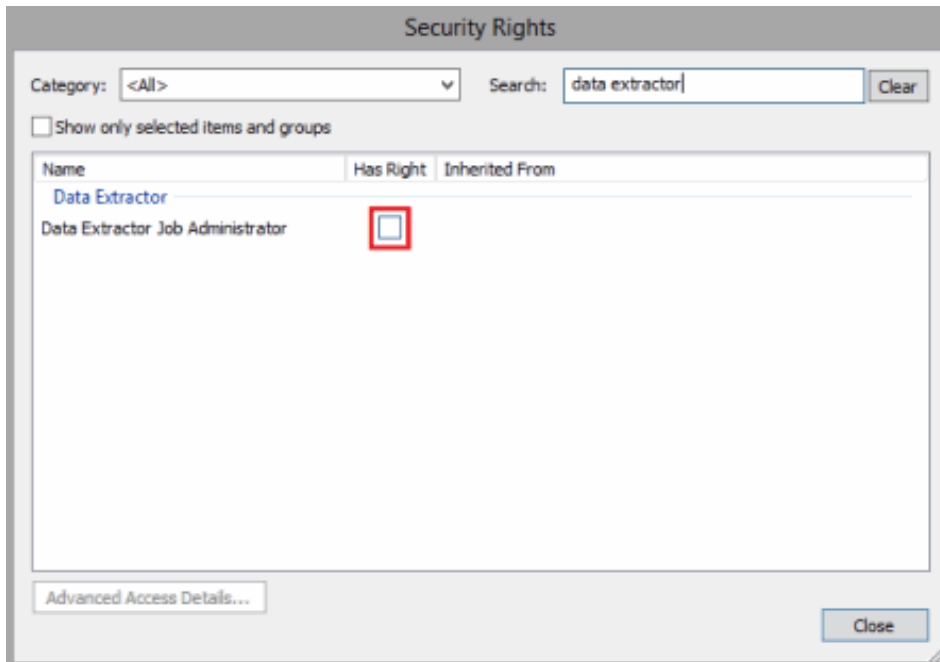

Security Rights

You can assign which user, workgroup, or role has the Security Right **Data Extractor Job Administrator**. This security right allows the user to view the extraction job details for *any* user. This right also allows the user to cancel queued or running jobs that were submitted by another user. Configure Security Rights in Interaction Administrator.

1. From the People container, select Roles, Users, or Workgroups. In the workspace, open a role, user, or workgroup to display its Configuration dialog box.
2. Select the **Security** page.

3. Click **Security Rights**.
4. In the Security Rights dialog box, in the **Search** field, type **data extractor**. The Data Extractor Job Administrator rights are displayed.

5. To assign the user, workgroup, or role Security Rights, select the **Data Extractor Job Administrator** check box., or clear the check box to remove the Security Rights.
6. Click **Close**.
7. On the Configuration dialog box, click **OK** or **Apply** to save the settings.

Email Notifications

An email notification can be sent to CIC administrators and users when an extraction job has completed, failed, or was canceled. If an IC Administrator Mailbox is configured, the CIC administrator receives emails for every job. If the data extractor user's Mailbox is

configured, the user receives emails for his or her submitted jobs.

Configure Email Notifications for CIC Administrators

1. Open Interaction Administrator.
2. From the **System Configuration** container, double-click **Configuration** in the workspace to display the System Configuration dialog.
3. Click the **Mailboxes** tab and configure the mailbox to use for the **IC Administrator**.

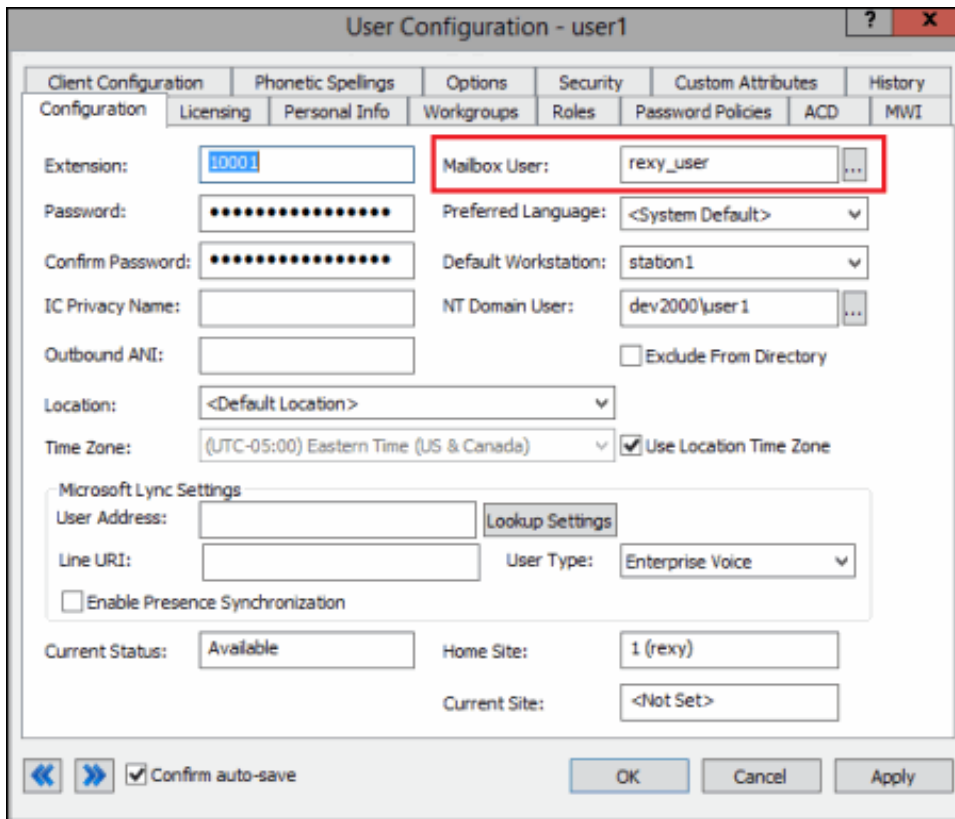

4. Click **OK** or **Apply** to save changes.

Configure Email Notifications for CIC Users

1. Open Interaction Administrator.
2. In the **People** container, from the **Users** subcontainer, double-click the user to configure their mailbox.

3. Click the **Configuration** tab and configure **Mailbox User** for the user.

The image shows a 'User Configuration - user1' dialog box with multiple tabs. The 'Configuration' tab is active, showing various user settings. A red rectangle highlights the 'Mailbox User' field, which contains the text 'rexy_user'. Other visible fields include 'Extension' (10001), 'Password' (masked), 'Confirm Password' (masked), 'IC Privacy Name', 'Outbound ANI', 'Location' (Default Location), 'Time Zone' (UTC-05:00 Eastern Time (US & Canada)), 'Microsoft Lync Settings' (User Address, Line URI, User Type: Enterprise Voice), 'Current Status' (Available), 'Home Site' (1 (rexy)), and 'Current Site' (<Not Set>). The dialog also has buttons for 'OK', 'Cancel', and 'Apply' at the bottom right, and a 'Confirm auto-save' checkbox at the bottom left.

Client Configuration	Phonetic Spellings	Options	Security	Custom Attributes	History		
Configuration	Licensing	Personal Info	Workgroups	Roles	Password Policies	ACD	MWI

OK Cancel Apply

4. Click **OK** or **Apply** to save changes.

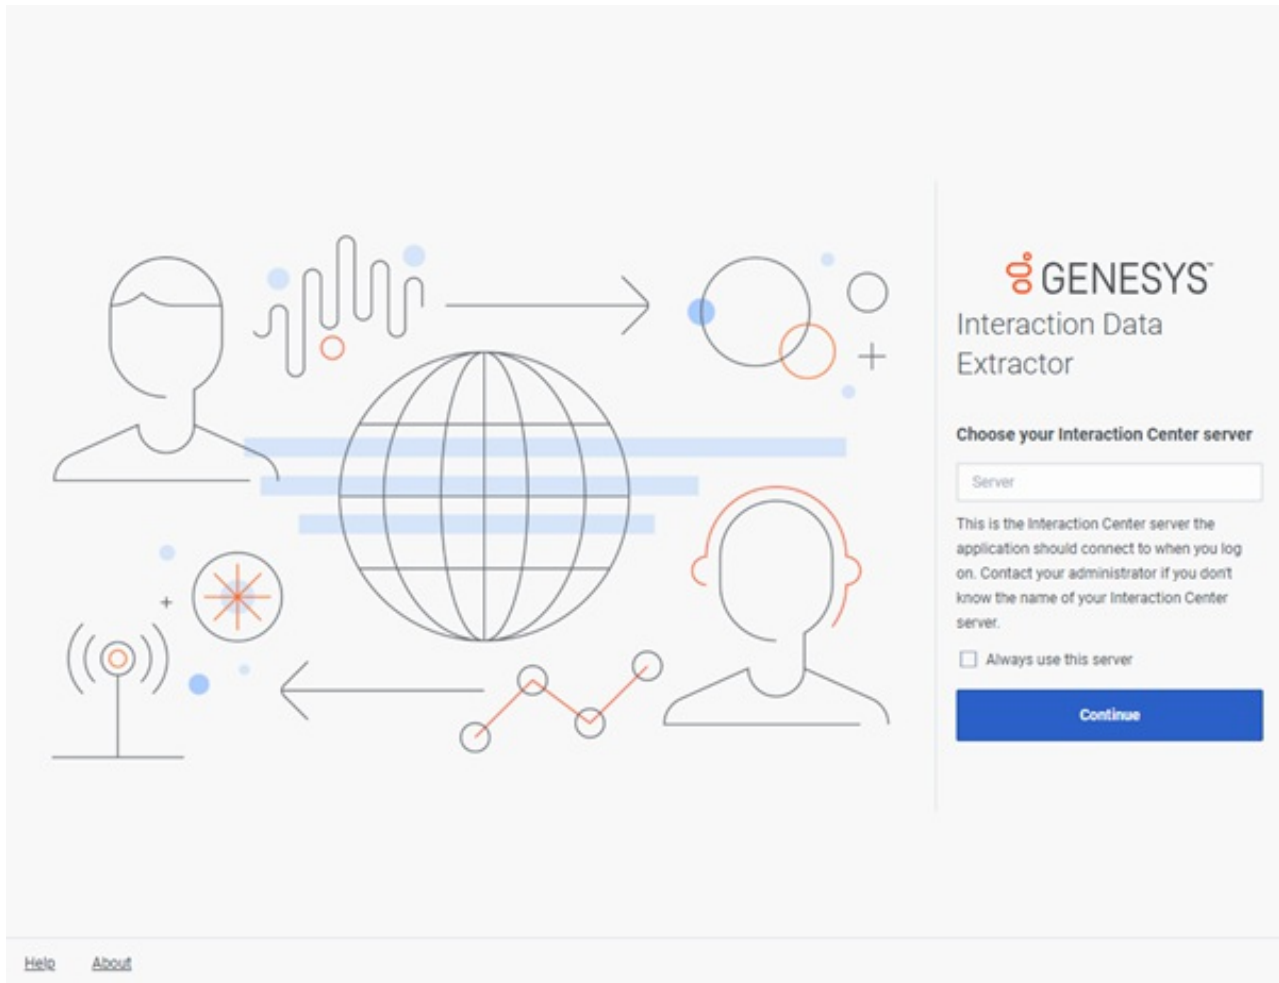

Starting Data Extractor

For information on logging on to Data Extractor, see the topics below **Starting Data Extractor**.

Logging On

Log on to Interaction Data Extractor from your browser. Your CIC administrator can give you the URL for the logon page.

1. Point your browser to the Data Extractor logon page.

2. On the Interaction Data Extractor logon page type the name of the Interaction Center server you want the application to connect to when you log on. Contact your administrator if you do not know the name of your Interaction Center server. Click **Continue**, and if your CIC administrator has enabled Single Sign On, the **Log on with** dialog page is displayed.

By default, **Windows Authentication** and **Interaction Center Authentication** are available.

3. On the **Log on with** dialog page, click one of the following:

- **Windows Authentication** to use your Windows User ID and Password to log on
- **Interaction Center Authentication** to use your CIC user name and password to log on

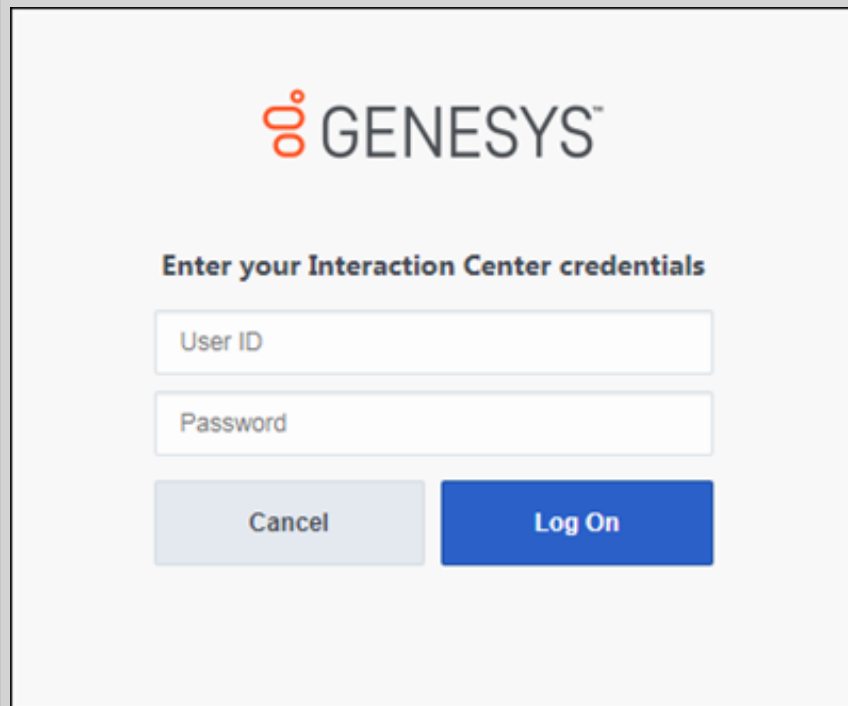

Notes

- The **Log on with** dialog page is only displayed if you can use more than one type of credentials to log on.
- If your CIC administrator has configured other Identity Providers in Interaction Administrator, you might have other available options on the **Log on with** page.

4. Depending on the chosen authentication method, enter the appropriate logon credentials.

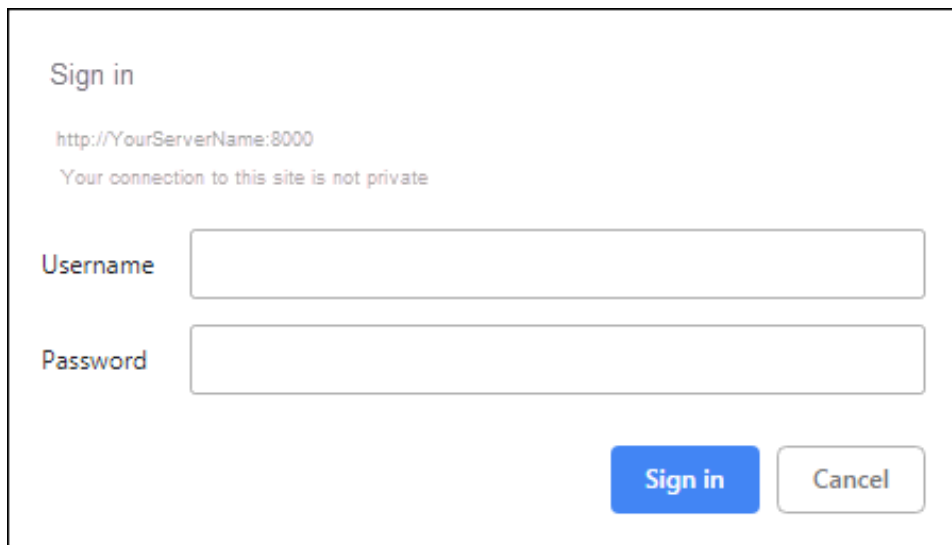

- If you selected Interaction Center Authentication, enter your CIC User ID and Password as configured in Interaction Administrator. Click **Log On**.

Note: This is the dialog box that is displayed if your CIC administrator has *not* enabled Single Sign On.

A login dialog box for GENESYS. At the top is the GENESYS logo, which consists of an orange stylized 'G' icon followed by the word 'GENESYS' in a grey sans-serif font. Below the logo is the heading 'Enter your Interaction Center credentials' in bold. There are two input fields: 'User ID' and 'Password'. Below these fields are two buttons: a light grey 'Cancel' button and a blue 'Log On' button.

- If you selected Windows Authentication, in the **Authentication Required** dialog box enter your Windows user name and password. Click **Log In**.

Note: This dialog box does not appear, if your CIC administrator configures your browser to enable Windows credentials to automatically pass to the CIC server. Also, the appearance of this dialog box varies according to the browser you use.

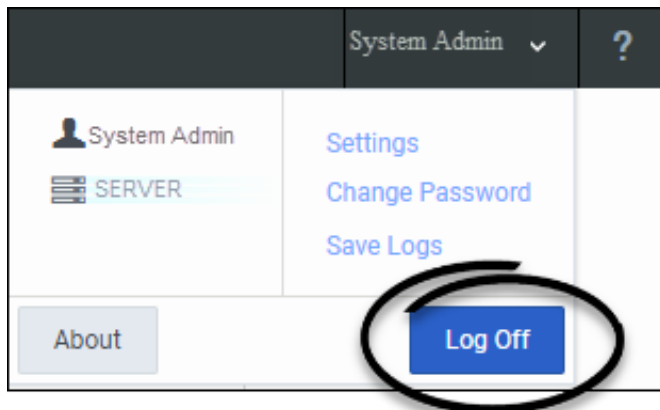

A 'Sign in' dialog box. At the top is the text 'Sign in'. Below it is the URL 'http://YourServerName:8000' and a warning message 'Your connection to this site is not private'. There are two input fields: 'Username' and 'Password'. At the bottom right are two buttons: a blue 'Sign in' button and a light grey 'Cancel' button.

- If you selected another Identity Provider in the **Log on with** dialog box, follow your CIC administrator's instructions for entering credentials and logging on.

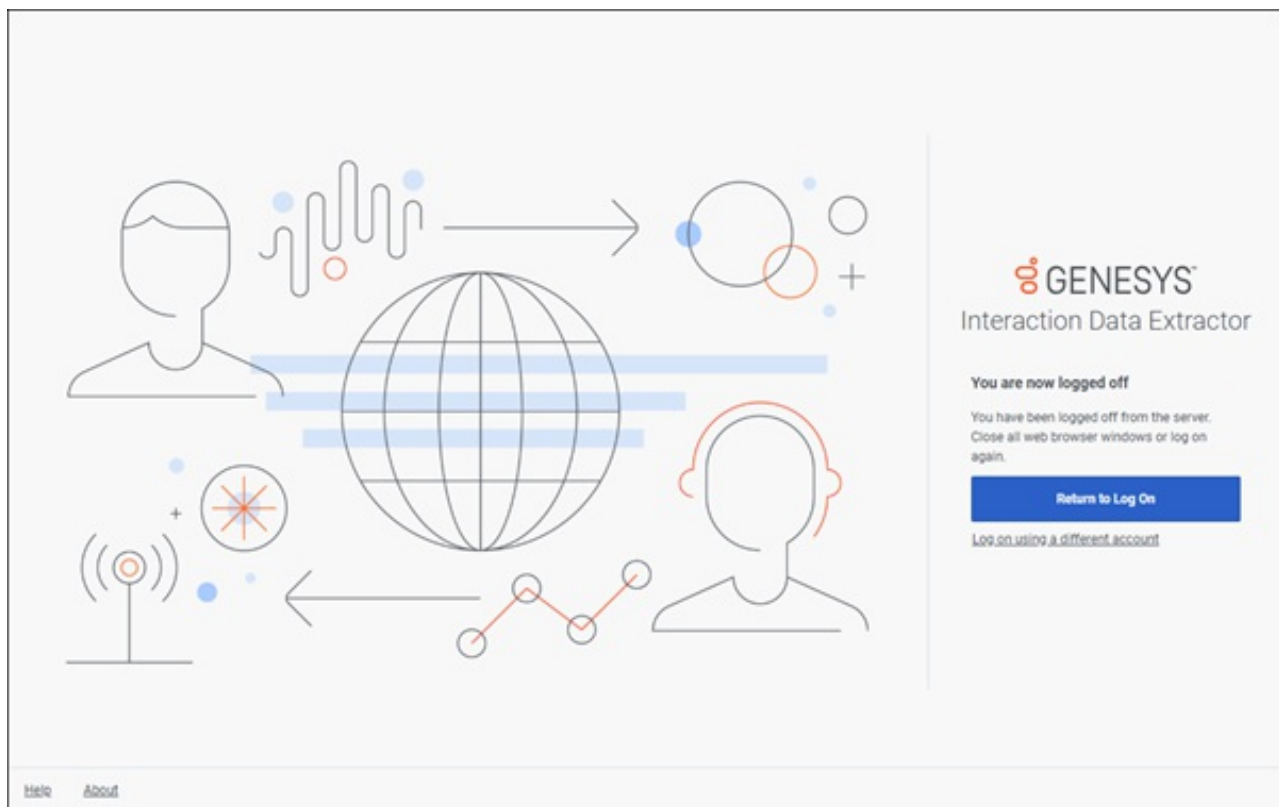

When you log on, the jobs dashboard is displayed. See [Job Status](#) to learn more about the dashboard.

Logging Off

To log off Interaction Data Extractor, click your user name, and on the menu, click **Log Off**.

You are logged off and the browser window does not close. To log on to Interaction Data Extractor again, click **Return to Log On**.

Exiting

To exit the Interaction Data Extractor application, click the **X** in the upper-right corner of the browser window or on the browser tab.

Managing Jobs

For information on job status and viewing details of a job, see the topics below **Managing Jobs**.

Job Status

When you log on, the jobs dashboard is displayed.

The **Pending Jobs** group shows which extraction jobs are actively running or pending execution.

The **Job Execution History** group shows past extraction jobs that have previously executed, including jobs that completed successfully, failed, or have been canceled.

All Jobs 

Refresh 

New 

Pending Jobs 

Status	Name	Updated	Owner
--------	------	---------	-------

Job Execution History 

Status	Name	Updated	Owner
	Red job	03/31/2017 3:23:07 PM	user2
	Two job	03/31/2017 3:22:37 PM	user2

More 

By default, logged-on users only see their own jobs. Click **All Jobs** to switch between viewing jobs for all users and viewing only your own jobs.

All Jobs 

Refresh 

New 

Pending Jobs 

When **All Jobs** are displayed, the All Jobs button turns blue and jobs for all users are displayed in the list.

<div> <div>All Jobs </div> <div>Refresh </div> <div>New </div> </div>			
Pending Jobs			
Status	Name	Updated	Owner
Job Execution History			
	Blue job	03/31/2017 3:31:04 PM	user1
	Red job	03/31/2017 3:23:07 PM	user2
	Two job	03/31/2017 3:22:37 PM	user2
	One job	03/31/2017 3:22:10 PM	user1
More ***			

Note: The 30 most recent extraction jobs are displayed. If more history is required, click **More** to retrieve an additional 30 jobs from the server.

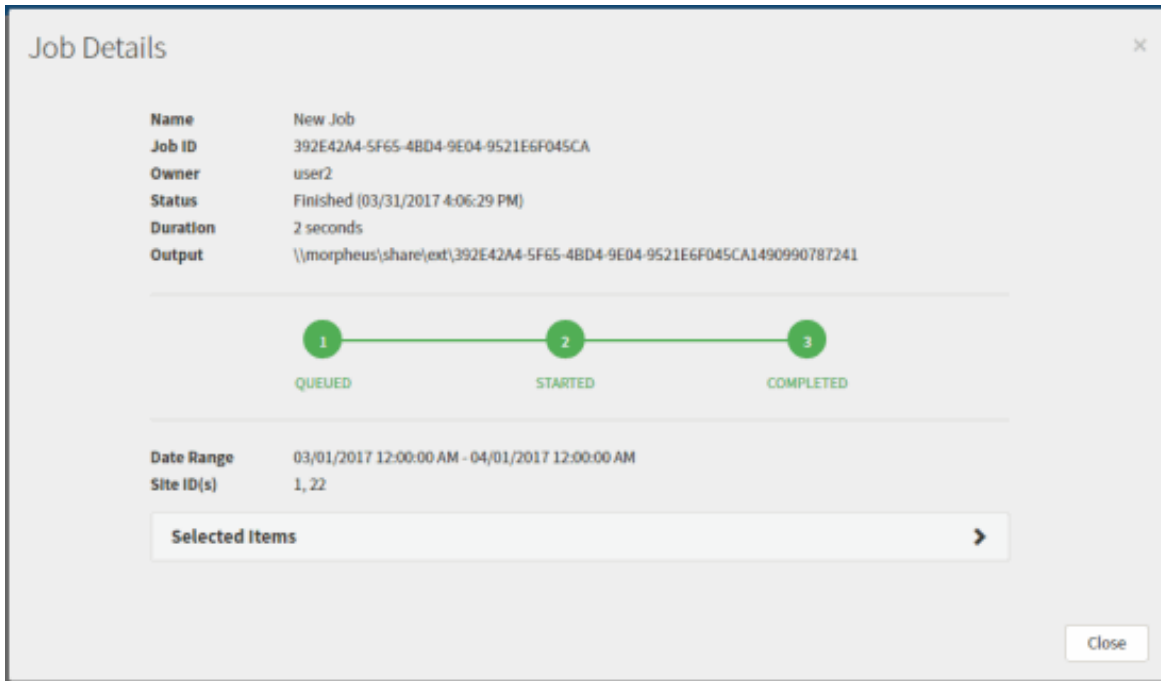

To create a new Data Extractor job, see [Creating a New Job](#).

Viewing Details of a Job

If you own a job or have been assigned the Data Extractor Job Administrator security rights, you are able to see additional details for a job. If additional details are available, the name of the job is in blue. For additional details on the job, click the job name.

The **Job Details** window displays additional information about the job, including Job ID, Owner, Status, and more.

Refreshing Job Status

The pending jobs list updates as jobs are executed.

To refresh the list of jobs and see additional jobs that might have been submitted, click **Refresh**.

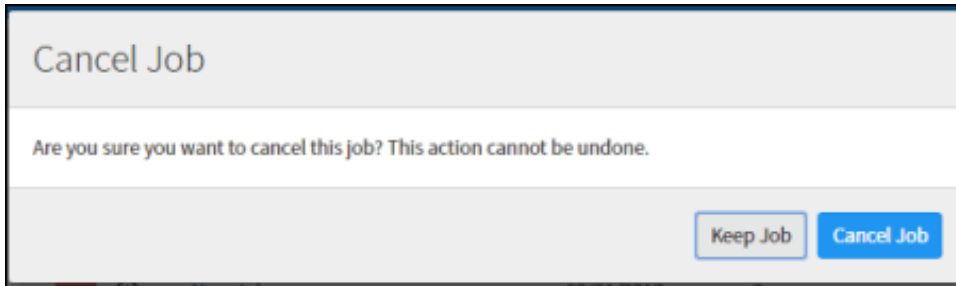

Canceling Jobs

If you own a job or have been assigned the Data Extractor Job Administrator security rights, you are able to cancel a pending job. To cancel a job, click **Cancel** next to the job name.

On the **Cancel Job** confirmation dialog, click **Cancel Job**.

Extracting Data

See the topics below **Extracting data** to create a new job and extract data from the CIC database tables.

Creating a New Job

To create a new Data Extractor job, click **New**.

The Data Extractor Job creation wizard opens.

Follow the steps in the job creation wizard to create a new data extraction job.

For more information, see [Extraction Job Wizard](#).

Extraction Job Wizard

The Extraction Job Wizard guides you through the process of creating a new data extraction job. You can cancel a job creation, before submitting, by clicking the **X** in the navigation bar.

Defining a new job

1. On the **Definition** page, select a dataset from which you want to extract data. Datasets are tables or views in the CIC database.

- For details about the selected dataset, click the **View Dataset Description** information icon.

- For details on a dataset column, select the column. A description of the column is displayed.

Definition

[Next →](#)[Definition](#) > [Filter](#) > [Submit](#)

Select columns in desired datasets from which to extract data.

Dataset AgentActivityLog

Type to filter columns

AgentActivityLog.AcdLoggedIn
AgentActivityLog.ChangedAcdL...
AgentActivityLog.ChangedLogg...
AgentActivityLog.ChangedStatus
AgentActivityLog.ChangedStatu...
AgentActivityLog.EndDateTime
AgentActivityLog.EndDateTime...
AgentActivityLog.I3TimeStam...

Selected

Logged In Agent's ACD State Changed

Flag indicating that the Agent's ACD logged in state changed in this state as compared to the previous state. 0 = No change, 1 = Changed.

2. From a dataset, select the columns to be extracted. You can select multiple columns using Ctrl+Click or Shift+Click.

Definition Next →

Definition > Filter > Submit

Select columns in desired datasets from which to extract data.

Dataset: AgentActivityLog ⓘ

Type to filter columns

- AgentActivityLog.AcdLoggedIn >>
- AgentActivityLog.ChangedAcdL... >
- AgentActivityLog.ChangedLogg... <
- AgentActivityLog.ChangedStatus <<
- AgentActivityLog.ChangedStatu...
- AgentActivityLog.EndDateTime
- AgentActivityLog.EndDateTime...
- AgentActivityLog.I3TimeStamp...

Selected

3. Next, move the selected columns to the **Selected** pane. To move selected columns:

- Click > to move the selected columns to the Selected pane.
- Click >> to move All columns, for the selected dataset, to the Selected pane.
- To remove a selected column from the Selected pane, click < for selected, or << for all.

Definition Next →

Definition > Filter > Submit

Select columns in desired datasets from which to extract data.

Dataset: AgentActivityLog ⓘ

Type to filter columns

- AgentActivityLog.ChangedAcdL... >>
- AgentActivityLog.ChangedLogg... >
- AgentActivityLog.ChangedStatus <
- AgentActivityLog.EndDateTime <<
- AgentActivityLog.EndDateTime...
- AgentActivityLog.I3TimeStamp...
- AgentActivityLog.LoggedIn
- AgentActivityLog.SeaNo

Selected

- AgentActivityLog.AcdLoggedIn
- AgentActivityLog.ChangedStatu...

- If you want to extract additional columns from another dataset, select a dataset from the **Dataset** picker, and repeat the column selection process.
- To continue, click **Next**.
- On the **Filter** page, define the interval DateTime for the data you are extracting, if applicable.

Filter ← Prev Next →

Definition > Filter > Submit

Specify a start date, end date, and site ID (optional) to filter the extraction.

Start Date 03/01/2017 12:00 AM

End Date March 2017

Site ID

Su	Mo	Tu	We	Th	Fr	Sa
26	27	28	1	2	3	4
5	6	7	8	9	10	11
12	13	14	15	16	17	18
19	20	21	22	23	24	25
26	27	28	29	30	31	1
2	3	4	5	6	7	8

Filter DateTimes are *lower bounds inclusive* and *upper bounds exclusive*. For example, with a **Start Date** of "3/01/2017 12:00AM" and an **End Date** of "04/01/2017 12:00 AM," the resulting query will be filtered by "dateColumn >= '2017-03-01 00:00' AND dateColumn < '2017-04-01 00:00.'"

- Type the **Site ID** for the sites to extract data from, if applicable.

Selected Items ▼

Tables

- AgentActivityLog
 - AcdLoggedIn
 - ChangedStatusGroup

Note Job names do not need to be unique. A unique job ID is assigned when the extraction job is created. This job ID can be obtained by viewing details for the job from the jobs dashboard. Extracted data will be written to a folder named similar to the job ID. The folder is located in the output location configured by your administrator.

11. To continue, click **Submit**. Click **Submit** again on the **Submit Job** confirmation dialog to send the job to the server and queue it for extraction.

A confirmation dialog box titled "Submit Job". It contains the text "Complete configuration and submit job for extraction?". At the bottom right, there are two buttons: "Cancel" and "Submit".

Submit Job

Complete configuration and submit job for extraction?

Cancel Submit

Note The data extractor subsystem creates a child process that connects to the database server and executes the extraction query. The child process runs at below normal priority. If the server is busy or under heavy load, the extraction process might delay in starting or take longer than expected.

For information about receiving an email on job status, see [Email Notifications](#).

Output Format

The CSV output of the Data Extractor conforms to RFC4180. The definition of this standard is found at:

<https://tools.ietf.org/html/rfc4180>

Additional Information

For more information on the Extractor Job Audit Table, and more, see the topics below **Additional Information**.

Extractor Job Audit Table

The Data Extractor application uses a table in the database to track submitted jobs, the configuration for jobs, and the various states of a job. Administrators can also query this table to find historical job information that is not presented in the application.

Data Dictionary

The *PureConnect Data Dictionary Technical Reference* provides a concise and detailed description of the database tables CIC uses to store and generate reports on historical data. This includes information stored for interactions, queue statistics, agent and user activity, line and line groups, administrative changes, and other Interaction Administrator configuration information.

The Data Dictionary assists you in understanding the structure and contents of CIC tables. The Data Dictionary can be accessed from the PureConnect Documentation Library on the Genesys website at <http://help.genesys.com/cic>

Save Logs

Your CIC administrator can set a server parameter in Interaction Administrator that hides the Save Logs command. Contact your CIC administrator for details.

If you experience a problem, you can generate an Interaction Data Extractor client log file, attach it to an email message, and send it your PureConnect Customer Care representative.

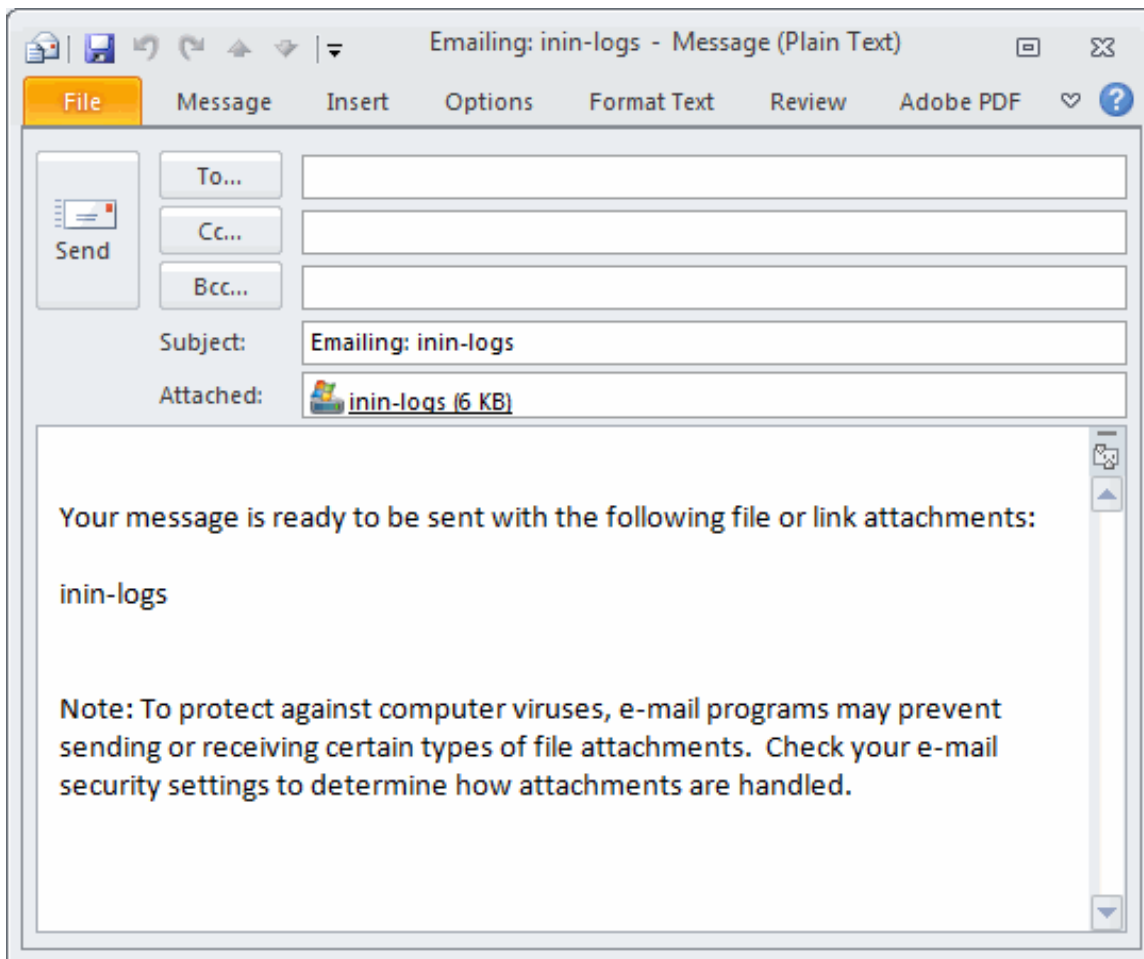

To generate a log file, from Interaction Data Extractor:

1. Click your user name, and then click **Save Logs**.

The Interaction Data Extractor client generates a log file named `inin-logs.txt` and places it in your browser's Downloads directory. If you previously created this file, the Data Extractor client appends a number to the log file name.

2. In your Windows Downloads directory, right-click the file and select **Send to > Mail recipient**.
A new email message opens in your default email program. The selected log file is attached to the message.

3. Supply any other useful information or comments in the email message.
4. Address the message to your PureConnect Customer Care representative or other designated person, and click **Send**.

Note Contact your CIC administrator for the email address for all of your company's problem reports.

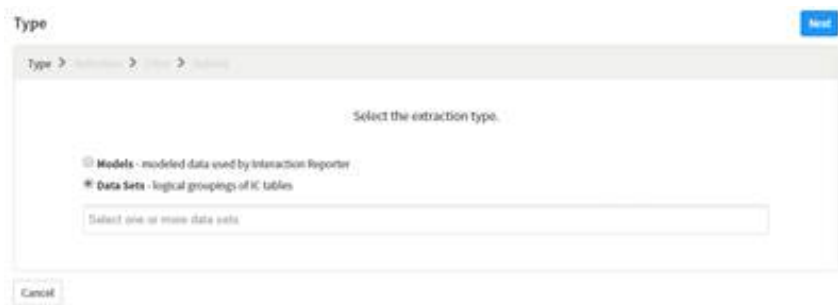

Miscellaneous topics

Canceling a New Job

To create a data extraction job, you must create a new job configuration. This is done by clicking the new job button from the job status page.

This should take you to the extraction type page, seen below.

A screenshot of a web form titled 'Type'. The form has a blue 'Next' button in the top right corner. Below the title, there is a breadcrumb trail: 'Type > Information > Other > Job Configuration'. The main content area is titled 'Select the extraction type.' and contains two radio button options: 'Models - modeled data used by Interaction Reporter' and 'Data Sets - logical groupings of IC tables'. The 'Data Sets' option is selected. Below the options is a text input field with the placeholder text 'Select one or more data sets'. At the bottom left of the form is a 'Cancel' button.

Feature

The Interaction Data Extractor is a simple web-based tool that allows you to extract data from CIC database tables.

Change log
